

## Logging into SAP Ariba with an Existing SAP Ariba Account

If you already have an SAP Ariba account, please follow these instructions to login to Rumpke's online vendor portal on SAP Ariba. If you have questions, contact [purchasing@rumpke.com](mailto:purchasing@rumpke.com).

1. You will first receive an email from Rumpke to submit a questionnaire. It will look like the email below. Click on the "Submit Questionnaire" link.

2. The following screen will appear. Click on **Use Existing Account** button.

3. The sign in screen will appear. Input your Username and Password. Then, click **Connect** button.
  - a. The connection to Rumpke's Ariba environment is established by logging into Ariba using your pre-existing Ariba userid and password. Our Ariba environment does not recognize the Ariba ANID field.
  - b. Rumpke uses Ariba as a third-party vendor management platform. This functionality allows us to collect and store your company information. However, it does not provide us with administrative access to vendor accounts.
  - c. Rumpke is unable to use your company's ANID number, as we are not utilizing Ariba for purchase order or invoicing capabilities currently.
  - d. The connection to Rumpke is established by identifying the correct contact and logging in with your preexisting company information or by creating an Ariba account.
